## Main Information Contractor<sup>+</sup> Services

Asset data processing poses challenges throughout the facility lifecycle, from pre-FEED through construction, handover, RFO and ongoing operations. In the CAPEX phase, complex facilities often prioritize delivery over the long-term usability of asset data, leaving handover information incomplete or poorly structured and undermining operational success. In the OPEX phase, the continuous activity of the facility drives a constant need for updates to data sets that become overwhelming to manage. This results in data that is missing, incorrect and not trustworthy.

ReVisionz' MIC<sup>+</sup> addresses these issues by providing comprehensive asset data management services across the full CAPEX and OPEX stages. We go beyond identifying gaps by applying advanced processes and AI to actively process and improve data. Our services extend the traditional Main Information Contractor role into a lifecycle partnership by managing the creation, validation and transfer of data during design and build, then maintaining information across the enterprise. By embedding data directly into business processes and supporting functions such as document control and maintenance planning, we ensure information is accurate, complete and always available to support critical decisions and performance.

## Common Challenges MIC<sup>+</sup> Services Solve

Information missteps during capital projects can leave operations burdened with poor quality data. Our MIC<sup>+</sup> services address these challenges at the source so that project information itself can become a long-term asset.

### Unstructured Handover

Capital project data is frequently delivered with gaps, inconsistent formats or misaligned structures. MIC<sup>+</sup> proactively manages the quality and completeness of handover information, which ensures data can be trusted as the facility enters operations.

### Poor Standards Alignment

Without a unifying framework, contractors may deliver information that doesn't conform to enterprise or regulatory standards. MIC<sup>+</sup> embeds alignment to industry and corporate asset information standards from the start so information supports every system and workflow that depends on it.

### Low Operational Usability

Project data is rarely structured for use in day-to-day workflows like maintenance, inspection or compliance. MIC<sup>+</sup> transforms this information into usable formats and embeds it into the context of business processes so teams can act on it with confidence.

### Lost Business Value Post-Project

When project teams disengage after construction, opportunities to validate and refine data for operations are lost. MIC<sup>+</sup> offers a sustained model that continues beyond handover, preserving data integrity, strengthening decision-making and turning information into a durable operational strength.

## Lifecycle-Ready Information

Owner-operators rely on ReVisionz because we take responsibility for making information usable long after a project is closed. It is straightforward to identify where data is incomplete, but much harder to repair and maintain it across the full landscape of systems and processes. That's why our team combines AI, natural language processing and decades of domain knowledge to restore trust in information and ensure that every system has the data it requires.

We sustain data in the context of your business processes so it can drive decisions at the exact moment of need. This means maintenance teams, operations and regulators all have access to accurate information that is properly connected and ready for use. Our role is to make sure data never becomes a liability but remains a resource that fuels

### Change Enablement

The success of your handover data is directly tied to people embracing and adopting the means to trust and use your new solution. Successful transformations require a strategy for the technological, organizational and individual impacts of related changes.

ReVisionz integrates client-customized change enablement and training in all our services to help you achieve the intended outcomes for your assets and prepare your organization to maximize value delivery from your projects.

## About

**REVISIONZ**

Pioneers in digital transformation programs since 2001, ReVisionz is the premier consulting and technology partner for owners-operators who want to enable an intelligent digital view of physical assets to unlock value and reduce safety, process and regulatory risk.
