

ReVISIONZ

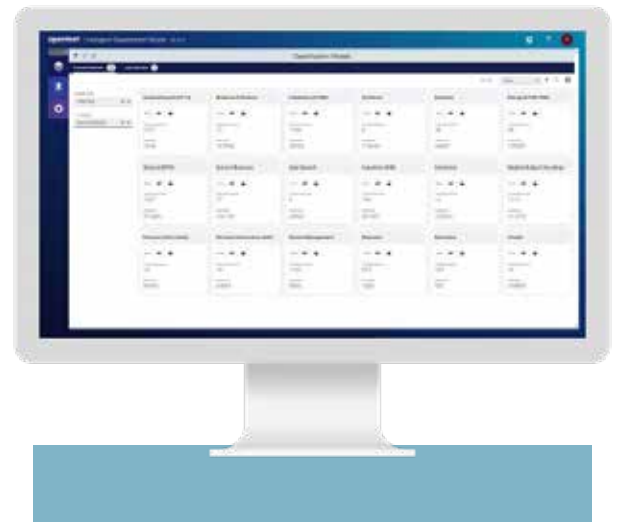

OpenText Services Overview

ReVisionz is the trusted OpenText implementation and sustainment partner for asset-intensive industries.

ABOUT ReVisionz

Pioneers in digital transformation since 2001, ReVisionz is a leading consulting and technology partner that helps owner-operators build intelligent digital representations of their assets. With deep experience implementing OpenText solutions that strengthen information governance and data accessibility, we share real-world insights on turning complex data into operational intelligence as regular presenters at OpenText World.

With decades Asset Information Management (AIM) experience, we help organizations unlock value, enhance safety and reduce risk. Home to North America's largest team of digital asset enablers, ReVisionz acts as a trusted intermediary between stakeholders by translating technology into measurable business outcomes across every stage of digital maturity.

opentext™ SERVICES

HOW WE UNLOCK OPENTEXT'S FULL POTENTIAL

PROBLEM

Complex engineering information is difficult to manage when systems are in need of modernization and slow down business process. Many OpenText customers feel this every day through legacy setups that no longer fit their work, low adoption across teams or integrations that fall short of what operations require.

Additionally, organizations considering OpenText are trying to address similar issues, especially scattered data and slow document control. Without a solution that supports the way people work, both groups face delays, rising costs and more risk across projects and operations.

SOLUTION

With a deep understanding of the unique challenges these industries face, ReVisionz optimizes your OpenText solution to meet current and future needs. Our experts help you maximize the value of your investment by improving operational efficiency, enhancing decision-making and facilitating seamless integration with existing systems.

Our hands-on approach provides long-term value through high-level support and continuous optimization.

Experts guiding your digital journey

COMMON CHALLENGES WITH opentext™

Organizations face many challenges when implementing and optimizing OpenText solutions. These hurdles can impede the full potential of this company investment if not addressed effectively.

Underutilized Functionality

OpenText solutions come with robust features that are often underused. Without a clear understanding of how to maximize these capabilities, organizations fail to unlock the full value of their investment, leaving critical functionality untapped.

Lack of Proper Implementation

Without proper implementation, OpenText can fail to integrate effectively into existing workflows. This leads to inefficiencies, user dissatisfaction and system performance issues, which ultimately hinder its value as a central repository for critical information.

Data Siloing & Duplication

Inconsistent use of OpenText across teams can result in data silos, with critical information scattered across local drives or other systems. This fragmentation limits collaboration, slows decision-making and increases the risk of errors.

Cost Upgrade Concerns

Many OpenText customers are using older versions of the engineering stack, and with support and maintenance for these versions ending soon, there are concerns about the cost and complexity of upgrading. The transition to newer systems can feel daunting and cause worry about hidden expenses and disruption to operations.

ReVisionz SERVICES MENU

Net New Implementation

Our team specializes in implementing new OpenText solutions with speed and precision. We have successfully delivered dozens of implementations for organizations of all sizes, always with a focus on rapid deployment and minimal disruption. By combining deep technical expertise with a proven change management approach, we also drive adoption and deliver measurable ROI.

Enhancement

Our experienced developers can create or update customizations, configurations and enhancements that are easy to maintain and upgrade. We leverage approved OpenText methods to make sure your business needs are met while minimizing future technical debt.

Upgrade

We excel at upgrading complex, large-scale OpenText environments with minimal downtime and risk. Our proven methodology ensures data integrity, smooth migration and optimized performance while keeping your business fully operational. With expert planning and post-upgrade support, we help you future-proof your technology investment.

Sustainment

ReVisionz helps organizations reimagine their OpenText sustainment strategy by offering “fit for purpose” support packages that are cost-competitive and staffed with best-in-class sustainment experts. Our clients consistently see improved service quality at a lower cost compared to their incumbent providers.

Migration

We have helped dozens of clients with migrating high volumes of complex documents and data. Our experts ensure data integrity, security and minimal business disruption while accelerating time-to-value. With robust validation and post-migration support, we set your organization up for seamless adoption and long-term success.

START THE CONVERSATION

ReVisionz is the trusted OpenText implementation partner for asset-intensive industries navigating complex digital transformation. Whether you're migrating from legacy systems or upgrading existing implementations, we help you achieve seamless integration and long-term success.
