AIM Solutions

Asset information loses value when teams cannot trust what they find or struggle to access the records they need. Disconnected systems, inconsistent metadata and poor governance create inefficiencies that impact operations long after project delivery.

ReVisionz helps organizations build asset information management (AIM) solutions within Octave InConcert (formerly Hexagon SDx) to create a stronger foundation for managing data across the asset lifecycle. As a trusted and award-winning Octave partner, we help owner-operators improve the way engineering and operational information is managed within their facilities.

Common Challenges in Asset Information Management

Without a structured AIM environment, asset information is difficult to locate, hard to verify and disconnected from the systems that rely on it.

Time Lost Searching for Information

Teams spend valuable time navigating repositories and shared drives looking for the right records. In many cases, they still cannot confirm if the information is current or complete.

Inconsistent Standards & Metadata

Different naming conventions and document structures create confusion across projects and departments. Without standardized metadata, information cannot be managed consistently.

Disconnected Systems

Asset records and operational documentation are usually separated across multiple systems. This limits visibility and weakens confidence in the integrity of business information.

Compliance & Governance Risk

Safety-critical documentation must remain controlled and accessible. Weak governance creates challenges with traceability, revision control and regulatory compliance.

Low Confidence in Information

Poor data quality creates uncertainty across operations. Teams hesitate to rely on information that may be outdated or difficult to verify.

Building Stronger AIM Environments

A well-structured AIM environment changes the way teams interact with asset information. Instead of searching through disconnected systems or questioning whether information is accurate, users can quickly access the records they need and work with greater confidence.

Within Octave InConcert, our AIM solutions create cleaner information structures and stronger alignment between documents and asset data. This improves day-to-day usability, supports more efficient operations and helps information remain reliable long after project

Change Enablement

The success of your AIM solution is directly tied to people embracing and adopting your new solution. Successful transformations require a strategy for the technological, organizational and individual impacts of related changes.

ReVisionz integrates client-customized change enablement and training in all our services to help you achieve the intended outcomes for your assets and prepare your organization to maximize value delivery

About

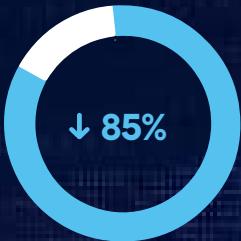

Pioneers in digital transformation programs since 2001, ReVisionz is the premier consulting and technology partner for owners/operators who want to enable an intelligent digital view of physical assets to unlock value and reduce safety, process and regulatory risk.

Performance Improvements With AIM Solutions

At the center of every facility is a web of interconnected asset data. Technical documents, maintenance history, compliance records, cost information and performance data all tie to a single piece of equipment. When that information is structured, linked and accessible in one place, teams can work with speed and confidence. This is what a well-built AIM environment makes possible.
